MARKET OPPORYUNITY

The Opportunity
The big data [data analysis] market in the health sector was $ 14.25 billion in 2017. This market could reach $ 68.75 billion by the end of 2025.

Goals
Collect, manage and exploit anonymous and secure data to contribute to the emergence of a medicine called "4 P" (predictive, preventive, personalized and participatory) in Africa
Develop a pole of expertise in "data sciences" to master the skills needed to effectively manage the health systems of tomorrow.

Patient Services
- Education, awareness and access to information
- Advice for avoiding health-related complications (eg eating habits)

Services for hospitals
- Access to continuing education and information
- Identification and follow-up of high-risk patients
- Admission Flow Forecasting to Assist Staff Allocation
- Capability to schedule patient visits

Valorization of the data
- Clinical analysis eg identification of disease risk factors, assistance with diagnosis, choice and monitoring of treatment efficacy, pharmacovigilance …
- Direct marketing
